

## **ESEH Representative Office in Ukraine**

### **Main goals and directions of work**

In Ukraine, the field of environmental history is a hardly developed field of research. Existing studies are scattered and fragmented, and the number of scientists who consistently work in the field of environmental history in Ukraine, is painfully few. Most environmental historians in Ukraine focus on the modern history of Ukraine, leaving large loopholes in the environmental history of earlier periods. In addition, Ukrainian researchers integrated into European and global science very weakly, which further disadvantage the development of environmental history in our country. Sadly, as of today, Ukrainian universities do not prepare specialists in environmental history, and lack adequate methodological support for research in environmental history.

Therefore, the main goal of ESEH' Representative Office in Ukraine is to increase the interest of the scientific community and students to environmental history, engage them in the research in this field, contribute to the development of a new and rapidly growing discipline in Ukraine and exchanging of information with European researchers.

The development of environmental history research under the umbrella of ESEH will help to integrate the Ukrainian researchers into the European scientific space. European historians will receive the opportunity for the establishment of wide-scale relations with the Ukrainian researcher, exchange with them different ideas and promote academic research on Ukraine from an environmental point of view.

Taking in account this peculiarity of Ukrainian situation we plan to develop environmental history in two parallel directions: in the academic environment and among the students of Ukrainian universities. We propose following activities:

- prepare and distribute monthly digest of environmental history news and ESEH news,
- create a list of researchers, who work in the field of environmental history and send them via e-mail the digest as well as news and activities of ESEH,
- organize network of researchers, who work in the field of environmental history,
- give a series of lectures on environmental history for students in the Ukrainian universities (Igor Sikorsky Kyiv Polytechnic Institute, Taras Shevchenko National University of Kyiv, Borys Grinchenko Kyiv University),

- promote the including of environmental history as one of the directions of student's conferences in Ukrainian universities; participation as the moderator of such panels,
- organize a number of scientific workshops for academics on the environmental history on the basis of Ukrainian universities or institutions of Academy of Science of Ukraine,
- personally participate in various Ukrainian scientific events devoted to the research in humanitarian field (as well as in events devoted to the improvement of research and teaching in high education) and promote environmental history as field of research and new perspective discipline.

Dr. Tetiana Perga,

Senior researcher of the State Institute

“Institution of World History of National Academy of Science of Ukraine”,

Leontovich Str.5, room 101, 01001, Kyiv, Ukraine
